

Explanation for screens:

1. User Identification screen
User can choose between "Customer" and "Cook".
2. If the user is a cook, he'll be prompted to a page to choose whether he wants to edit menu or check/complete existing order.
3. If he chooses to edit menu, the app will show him a listview of all the food items available with an edit button next to each item. On the top right corner of the screen, there is also an add button for user to add new food item.
4. If user clicks either edit or add new item, he'll be able to view/add/edit ingredients for the food item. Also, the user is able to take a picture of the food item and add it to the page.
5. On view order page, user is able to view existing orders and check off an order if the order is complete.
6. Customer Order Screen
Shows the menu including all the available food. The menu is retrieved from the SQL database updated by cooks. Customers can make orders by selecting one or more menu items, and the quantities of each item.
7. Checkout Screen
Shows the customer's order and ask for his/her name. The customer places the order by clicking on the "Place Order" button.
